Rule 4.3. Indiana Residential Code

675 IAC 14-4.3-1 Adoption by reference; title; purpose

Authority: IC 22-13-2-2; IC 22-13-2-13
Affected: IC 22-12; IC 22-13; IC 22-14; IC 22-15; IC 36-7

Sec. 1. (a) Those certain documents being titled the 2003 International Residential Code for One and Two Family Dwellings, fifth printing, and Chapter 43 of the 2006 International Residential Code for One and Two Family Dwellings, first printing, published by the International Code Council, 5203 Leesburg Pike, Suite 708, Falls Church, Virginia 22041-3401, are hereby adopted by reference as if fully set out in this rule save and except those revisions made in this rule.

(b) This rule shall be:
(1) known as the Indiana Residential Code, 2005 edition; and
(2) published, except incorporated documents, by the department of homeland security for general distribution and use under that title.

Wherever the term "this code" is used throughout this rule, it shall mean the Indiana Residential Code, 2005 edition.

(c) This rule is available for reference and review at the Department of Homeland Security, Indiana Government Center-South, 402 West Washington Street, Room W246, Indianapolis, Indiana 46204.

(d) The purpose of this code is to provide minimum requirements for safety and to safeguard property, public safety, and general welfare through affordability, by regulating and controlling the design, construction, installation, and quality of materials of residential structures as regulated by this code. (Fire Prevention and Building Safety Commission; 675 IAC 14-4.3-1; filed Jun 13, 2005, 3:00 p.m.: 28 IR 3256, eff 90 days after filing with the Secretary of State; filed Mar 6, 2008, 11:13 a.m.: 20080402-IR-
Sec. 2. Delete Chapter 1 and substitute as follows: (a) SECTION R101 Application is added to read as follows: SECTION R101 APPLICATION
The provisions of this code apply to the construction, prefabrication, alteration, addition, and remodel of detached one or two family dwellings and one family townhouses not more than 3 stories in height and their accessory structures.
This code does not apply to manufactured homes as defined in SECTION R202, SECTION AE201, and IC 22-12-1-16 except as addressed in APPENDIX E.
This code does not apply to mobile structures as defined in IC 22-12-1-17.
Townhouses are classified as Class 1 structures and detached one and two family dwellings and their accessory structures are classified as Class 2 structures.
Provisions in the appendices are not enforceable unless specifically adopted.
The codes and standards referenced in this code shall be considered part of the requirements of this code to the prescribed extent of each such reference. Where differences occur between provisions of this code and referenced codes and standards, the provisions of this code shall apply.
EXCEPTION: Where the enforcement of a code provision would violate the listing of the equipment, appliance, manufacturer's instructions or certification of engineered products by a registered architect registered under IC 25-4 or a professional engineer registered under IC 25-31, the conditions of the listing, manufacturer's instructions, or professional certification by a registered architect or professional engineer shall apply.
(b) SECTION R102 is added to read as follows: SECTION R102 APPEALS AND INTERPRETATIONS
Appeals from orders issued by the Fire Prevention and Building Safety Commission, the state building commissioner, or the state fire marshal are governed by IC 4-21.5 and IC 22-12-7. Appeals from orders by a local unit of government are governed by IC 22-13-2-7 and local ordinance. Upon the written request of an interested person, the office of the state building commissioner may issue a written interpretation of a building law. The written interpretation as issued under IC 22-13-5 binds the interested person and the county or municipality with whom the interested person has the dispute until overruled under IC 4-21.5. A written interpretation of a building law binds all counties and municipalities if the office of the state building commissioner publishes the written interpretation of the building law in the Indiana Register under IC 4-22-7-7(b).
(c) SECTION R103 is added to read as follows: SECTION R103 PLANS
Plans shall be submitted for Class 1 structures as required by the General Administrative Rules (675 IAC 12-6) and for Class 2 structures as required by local ordinance.
(d) SECTION R104 is added to read as follows: SECTION R104 EXISTING CONSTRUCTION
For existing construction, see the General Administrative Rules (675 IAC 12-4) and local ordinance.
(e) SECTION R105 is added to read as follows: SECTION R105 ADDITIONS AND ALTERNATIONS
Additions and alterations to any structure shall conform to that required for a new structure without requiring the existing structure to comply with all the requirements of this code. Additions or alterations shall not cause an existing structure to become unsafe.
(f) SECTION R106 is added to read as follows: SECTION R106 ALTERNATIVE MATERIALS, METHODS, AND EQUIPMENT
SECTION R106.1 ALTERNATE MATERIALS, METHODS, AND EQUIPMENT
The provisions of this code are not intended to limit the appropriate use of materials, appliances, equipment, or methods of design or construction not specifically prescribed by this code. The building official shall determine equivalence of the proposed alternate materials, appliances, equipment, or method of design or construction of that prescribed in this code in suitability, quality, strength, effectiveness, fire resistance, durability, dimensional stability, safety, and sanitation on the basis of evidence and/or tests as described in R106.2 and R106.3, as suitable to be approved. For Class 1 structures, alternate materials, methods, equipment, and design shall be as required by the General Administrative Rules (675 IAC 12-6-11). Compliance with specific provisions of the Indiana Building Code (675 IAC 13) or the Indiana Plumbing Code (675 IAC 16) in lieu of the requirements of this code shall be permitted as an alternate.
SECTION R106.2 EVIDENCE
The building official may require that evidence or proof be submitted to substantiate any claims that may be made regarding the proposed alternate.

SECTION R106.3 TESTS AND STANDARDS
The determination of equivalence shall be based on design or test methods or approved standards. In addition, the building official may accept as supporting data to assist in this determination duly authenticated reports from the Building Officials and Code Administrators International, Inc., Southern Building Code Congress International, Inc., International Conference of Building Officials, the International Code Council, Inc., or their successors, or acceptance documents from the U.S. Department of Housing and Urban Development, the certification of a registered architect registered under IC 25-4 or a professional engineer registered under IC 25-31, or the General Administrative Rules (675 IAC 12).

Whenever there is insufficient evidence of compliance with the provisions of this code, or evidence that a material or method does not conform to the requirements of this code, or in order to substantiate claims for alternative materials or methods, the building official shall have the authority to require tests as evidence of compliance to be made at no expense to the jurisdiction. Tests shall be performed by an approved agency. Reports of such test shall be retained by the building official for a period required for retention of public records.

(g) SECTION R107 is added to read as follows: SECTION R107 WORKMANSHIP
General Workmanship. All construction methods shall be accepted practices to ensure livable and safe housing and shall demonstrate acceptable workmanship. (Fire Prevention and Building Safety Commission; 675 IAC 14-4.3-2; filed Jun 13, 2005, 3:00 p.m.: 28 IR 3256, eff 90 days after filing with the Secretary of State)

675 IAC 14-4.3-3 Section R202; definitions
Authority: IC 22-13-2-2; IC 22-13-2-13
Affected: IC 22-12; IC 22-13; IC 22-14; IC 22-15; IC 25-4; IC 25-31; IC 36-7

Sec. 3. Change Section R202, Definitions, as follows:
(1) Change the definition of ACCESSORY STRUCTURE to read as follows: In one and two family dwellings and for the purpose of APPENDIX E, structures not more than 3 stories high with separate means of egress, and the use of which is incidental to that of the main building and which is located on the same lot.
(2) Change the definition of ALTERATION by deleting "other than repair".
(3) Change APPROVED to read as follows: APPROVED means, as to materials, equipment, appliances, methods of design, and types of construction, acceptance by the building official by one (1) of the following methods:
   (1) investigation or tests conducted by recognized authorities;
   (2) investigation or tests conducted by technical or scientific organizations; or
   (3) accepted principles.

The investigation, tests, or principles shall establish that the materials, equipment, appliances, methods of design, and types of construction are safe for their intended purpose.
(4) Change the definition of BUILDING, EXISTING to read as follows: BUILDING, EXISTING. Existing building is a building or structure erected prior to the adoption of this code.
(5) Change the definition of BUILDING OFFICIAL to read as follows: BUILDING OFFICIAL, as used in this code, shall be the local official or officials as designated in local ordinance, except it shall be the state building commissioner for Industrialized Building Systems under 675 IAC 15 and IC 22-15 and for plan review for townhouses under 675 IAC 12 and IC 22-15.
(6) Delete the definition of CONSTRUCTION DOCUMENTS and substitute to read as follows: CONSTRUCTION DOCUMENTS. For construction documents, see the General Administrative Rules (675 IAC 12) for Class 1 structures and local ordinance for Class 2 structures.
(7) Delete, from the definition of ESSENTIALLY NONTOXIC TRANSFER FLUIDS, "; and FDA-approved boiler water additions for steam boilers".
(8) Change the definition of EXISTING INSTALLATIONS to read as follows: Any system regulated by this code that was legally installed prior to the effective date of this code.
(9) Add a definition of FAMILY after the definition of FACTORY-BUILT CHIMNEY to read as follows: FAMILY means an individual or 2 or more persons related by blood or marriage and/or a group of not more than 10 persons (excluding
servants) who need not be related by blood or marriage living together in a dwelling unit.

(10) Change the definition of FIREBLOCKING to read as follows: Building materials, or materials labeled for use as fireblocking, installed to resist the free passage of flame to other areas of the building through concealed spaces.

(11) Add, in the definition of FOAM PLASTIC INSULATION, "of" between "consisting" and "open".

(12) Add a definition of FOUNDATION WALL after FOAM PLASTIC INSULATION to read as follows: FOUNDATION WALL means the supporting element(s) that extend from the top of the footing to the bottom of the sill plate.

(13) Delete, in the definition of HEATING DEGREE DAY (HDD), "acceptable to the code" and substitute "approved by the building".

(14) Add the following definitions after INSULATING SHEATHING:

- INTERNATIONAL BUILDING CODE means the Indiana Building Code (675 IAC 13).
- ICC ELECTRICAL CODE means the Indiana Electrical Code (675 IAC 17).
- INTERNATIONAL MECHANICAL CODE means the Indiana Mechanical Code (675 IAC 18).
- INTERNATIONAL PLUMBING CODE means the Indiana Plumbing Code (675 IAC 16).

(15) Delete the definition of LABELED and substitute to read as follows: LABELED. Equipment or materials to which has been attached a label, symbol, or other identifying mark of an organization engaged in product evaluation that maintains periodic inspection or production of labeled equipment or materials and by whose labeling the manufacturer indicates compliance with appropriate standards or performance in a specified manner.

(16) Delete the definition of LISTED AND LISTING and substitute to read as follows: LISTED AND LISTING. Equipment or materials included in a list published by an organization engaged in product evaluation that maintains periodic inspection of production of listed equipment or materials and whose listing states either that the equipment or material meets appropriate standards or has been tested and found suitable for use in a specified manner.

(17) Add a definition of MONO-PITCH TRUSS after MODIFIED BITUMEN ROOF COVERING to read as follows: MONO-PITCH TRUSS means a truss with a top chord having a single uninterrupted slope of more than 1.5/12.

(18) Add a definition of NATIONAL ELECTRICAL CODE after MULTIPLE STATION SMOKE ALARM to read as follows: NATIONAL ELECTRICAL CODE means the Indiana Electrical Code (675 IAC 17).

(19) Add a definition of NFPA 70 after NATURAL DRAFT SYSTEM to read as follows: NFPA 70 means the Indiana Electrical Code (675 IAC 17).

(20) Delete the definition of PERMIT.

(21) Delete, in the definition of PLUMBING, ", repairs, maintenance".

(22) Delete, in the definition of PLUMBING APPURTENANCE, ", maintenance, servicing, economy".

(23) Delete the definition of POTABLE WATER and substitute to read as follows: POTABLE WATER. Water that at the point of use is acceptable for human consumption under drinking water standards adopted by the Water Pollution Control Board at 327 IAC 8.

(24) Change the definition of RECESSED LIGHT after RECEPTOR to read as follows: RECESSED LUMINAIRE. For purposes of Chapter 11, RECESSED LUMINAIRE means a luminaire that by design penetrates the thermal boundary of the building.

(25) Add a definition for REGISTERED DESIGN PROFESSIONAL to read as follows: REGISTERED DESIGN PROFESSIONAL means an architect who is registered under IC 25-4 or a professional engineer who is registered under IC 25-31.

(26) Delete the definition of ROOF REPAIR.

(27) Add a definition of SILL PLATE after the definition of SIDE VENT to read as follows: SILL PLATE means in frame construction the bottom rough structural member that rests on the foundation.

(28) Add a definition of SLAB-ON-GRADE FLOOR INSULATION after SKYLIGHT AND SLOPED GLAZING to read as follows: SLAB-ON-GRADE FLOOR INSULATION means insulation around the perimeter of the floor slab or its supporting foundation.

(29) Add a definition of SOLE PLATE after the definition of SOLAR HEAT GAIN COEFFICIENT (SHGC) to read as follows: SOLE PLATE means in frame construction the horizontal member of a frame wall or partition that rests on any type floor.

(30) Add a definition of SMOKE ALARM after SLOPE to read as follows: SMOKE ALARM an alarm device that is
(31) Add a definition of TACTILE NOTIFICATION APPLIANCE after SWEEP to read as follows: TACTILE
NOTIFICATION APPLIANCE a notification appliance that alerts by sense of touch or vibration.
(32) Add to the definition of TOWNHOUSE, between "units" and "in", "separated by property lines".
(33) Change, in the definition for UNUSUALLY TIGHT CONSTRUCTION, 3, to read as follows: 3. Caulking or sealants
are applied to joints and openings in the thermal envelope of the building such as: joints around window and door frames;
between supporting structure and sill and sole plates; wall-ceiling joints; and at penetrations for plumbing, electrical and gas
lines.
(34) Add a definition of WORKMANSHIP after the definition of WOOD STRUCTURAL PANEL to read as follows:
WORKMANSHIP means the installation, application, or construction of materials, equipment, or fixtures as they are intended
to be incorporated into a one-or-two-family dwelling as mandated by this code, the manufacturer, or industry standards. Items
that are aesthetic in nature and that do not affect the livability, intended use, or the safety of a structure are excluded.

(3) Add the following Section to the Indiana Administrative Code:
675 IAC 14-4.3-4 Section R301.2; climatic and geographic design criteria
Authority: IC 22-13-2-2; IC 22-13-2-13

Sec. 13.5. Make the following changes to Section R301.2.2.2.1:
(1) Change the first sentence to read as follows: Average dead loads shall not exceed 15 psf (0.72 kN/m²) for the combined roof and ceiling assemblies (on a horizontal projection) or 10 psf (0.48 kN/m²) for floor assemblies, except as further limited by Section R301.2.2.

(2) Change the exception to read as follows: Exceptions: 1. Roof and ceiling dead loads not exceeding 25 psf (1.19 kN/m²) shall be permitted provided the wall bracing amounts in Chapter 6 are increased in accordance with Table R301.2.2.2.1.

(3) Add two (2) exceptions to read as follows:
2. Light-frame walls with stone or masonry veneer shall be permitted in accordance with the provisions of Sections R702.1 and R703.
3. Fireplaces and chimneys shall be permitted in accordance with Chapter 10. (Fire Prevention and Building Safety Commission; 675 IAC 14-4.3-13.5; filed Mar 6, 2008, 11:13 a.m.: 20080402-IR-675070483FRA)

   Sec. 17. Add a subsection to SECTION R301.5 to read as follows: R301.5.1 Live Load Reduction.
   1. Tributary floor area. A structural member which supports a tributary floor area of greater than 200 square feet on a given story is permitted to be designed using a reduced uniform floor live load for each qualifying story in accordance with the following formula:

   \[
   L = L_0 \left[ 0.25 + \frac{10.6}{\sqrt{A_t}} \right] \geq 0.75 \text{ for } A_t > 200 \text{ ft}^2

¹Attics where attic access is not required by SECTION R807.
²Attics where attic access is provided as required by SECTION R807 and a disappearing stairway or a permanent stairway is not provided. This load shall be noncurrent with any other load.
³Attic spaces having a minimum clear height greater than 6 feet and are not capable of containing the prism described in footnote 4 and are served by a disappearing or a permanent stairway.
⁴Attic spaces that are capable of containing a rectangular prism 7 feet high by 6 feet wide by 8 feet long free of any structural member.
⁵For trusses, the 30 pounds per square foot live load shall be applied over the entire length of the truss panel that contains the prism required by footnote 4.
⁶Passenger cars only.
⁷Individual stair treads shall be designed for the uniformly distributed live load of 40 pounds per square foot or a 300 pound concentrated load acting over an area of 4 square inches, whichever produces the greater stress.
⁸Elevated garage floors shall be capable of supporting a 2,000 pound load applied over a 20 square inch area.
⁹A single concentrated load applied in any direction at any point along the top.

(2) Change the text of Section R309.2 to read as follows: The garage shall be separated from the residence and its attic area by a smoke separation of not less than 1/2 inch (13 mm) gypsum board applied to the garage side of the framing. Exception: Pull down stairs may be installed in garage/attic separations when installed in a manner that resists the passage of smoke.
(3) Change the second paragraph of Sections R309.3 and R309.4 to read as follows: The area of floor used for parking of automobiles or other vehicles shall be sloped to facilitate the movement of liquids to an approved drain or toward the main vehicle entry doorway.
(4) Delete the title and text of Section R309.5, Flood hazard areas, and substitute to read as follows: R309.5 Detached garages, carports, or accessory structures.
R309.5.1 Separation. Detached garages, carports, and accessory structures shall be separated from dwellings by not less than 6 feet (1,829 mm) of open space, except that such space may be roofed in accordance with Chapters 8 and 9 of this code. Detached garages, carports, and accessory structures separated from dwellings by less than 6 feet (1,829 mm) of open space shall be considered the same as attached garages, carports, and accessory structures. In no case shall garages, carports, or accessory structures be attached to the dwelling when the footings of the structure to be attached are above the frost line and the adjacent footings of the dwelling are at or below the frost line unless approved by the building official.
R309.5.2 Requirements. Detached garages, detached carports, or accessory structures shall be constructed to applicable sections of this code unless otherwise noted in TABLE R309. Any habitable area(s) located within a detached garage or accessory structure shall meet all applicable sections of this code and shall be provided with an exit door as specified in Section R311.

**Affected:** IC 22-12; IC 22-13; IC 22-14; IC 22-15; IC 36-7

Sec. 27. Change Section R310 as follows:

1. Change the first sentence of Section R310.1 to read as follows: Every sleeping room shall have at least one openable emergency escape and rescue opening that opens directly to the exterior.
2. Delete the second sentence of Section R310.1 without substitution.
3. In Section R310.1.2, change "24 inches (610 mm)" to "22 inches (559 mm)".
4. Add Section R310.1.5 to read as follows: R310.1.5 Sleeping room replacement window alterations. When replacing existing sleeping room windows, at least one of the replacement windows within that sleeping room shall comply with Section R310.5. Replacement windows that do not meet the current emergency escape requirements of Section R310, without structural alterations to the dwelling, may be installed as long as they meet the following requirements.
   1. Replacement window installation shall not reduce the existing net clear opening by more than 6 inches horizontally and 6 inches vertically, except that awning replacement windows shall not reduce the existing net clear opening by more than 3 inches vertically.
   2. In no case shall the replacement window net clear opening height be less than 22 inches (559 mm) and the net clear opening width be less than 20 inches (508 mm).
   3. Double hung or sliding replacement windows shall have both sashes removable without the use of a key or tool. Single hung installations are not allowed by this section.
   4. Casement and awning replacement windows may obtain the required net clear opening with the use of egress hardware.
   5. If the replacement window cannot meet the minimum requirements listed in subdivisions 1, 2, 3, and 4, the existing window shall be replaced with a like window without reducing the existing net clear opening.
5. Add Section R310.3.1 to read as follows: R310.3.1 Door swing. In areas subject to snow or ice accumulation, doors installed at the bottom of bulkhead enclosures to basements that serve as escape and rescue openings shall swing into the structure.
6. Add Section R310.5 to read as follows: R310.5 Emergency escape windows under decks and porches. Emergency escape windows are allowed to be installed under decks and porches provided the location of the deck or porch allows an unobstructed passageway, not less than 30 inches (762 mm) high, 30 inches (762 mm) wide and not more than 20 feet (6.1 m) in length, to a yard or court.

Sec. 28. Delete the title and text of Section R311.4.3 and substitute to read as follows:

R311.4.3 Landings at exterior doors. There shall be a landing on each side of each exterior door. The width of each landing...
shall not be less than the width of the door served. Every landing shall have a minimum dimension of 36 inches (914 mm) measured in the direction of travel. Exterior landings shall be permitted to have a slope not to exceed 25 units vertical in 12 units horizontal.

R311.4.3.1 Landings at the required exit door. Landings on the interior side of the required exit door shall not be more than 1.5 inches (38 mm) lower than the top of the threshold. Landings on the exterior side of the required exit door shall not be more than 8.25 inches (209 mm) below the top of the threshold. Where exterior landings serving the required exit door are not at grade level, they shall be provided with access to grade by steps, a stairway in accordance with Section R311.5 or a ramp in accordance with Section R311.6.

R311.4.3.2 Landings at the non-required exterior door. Doors, other than the required exit door, shall have landings installed not lower than 8.25 inches (209 mm) below the top of the threshold.

Exceptions:

1. Where the distance in height, measured between the top of the threshold and a floor below, is 16.5 inches (418 mm) or less, a single step with tread depth of at least 11 inches (279 mm) is permitted to be installed instead of a landing.

2. When a stairway of three or fewer risers is located at a non-required exterior door, a landing is not required for the exterior side of the non-required exterior door, provided the door, other than the screen or storm door, does not swing over the stairway.

(a) In the living area remote from the kitchen and cooking appliances. Smoke alarms located within 20 feet (6.1 m) horizontally of a cooking appliance must incorporate a temporary silencing feature or be photoelectric type.
(b) In each room designed for sleeping.
(c) On the ceiling of the upper level near the top or above each stairway, other than a basement stairway, in any multistory dwelling. The alarm shall be located so that smoke rising in the stairway cannot be prevented from reaching the alarm by an intervening door or obstruction.
(d) On the basement ceiling near the stairway.

R313.2.1 Alterations and additions. When interior alterations or additions requiring a permit occur, or when one or more sleeping rooms are added or created in existing dwellings, the individual dwelling unit shall be provided with smoke alarms located as required for new dwellings; the smoke alarms shall be interconnected and hard wired.

Exceptions:
1. Smoke alarms in existing areas shall not be required to meet the requirements of R313.5 where the alterations do not result in the removal of the interior wall or ceiling finishes exposing the structure unless there is an attic, crawlspace, or basement available that could provide access for hard wiring and interconnection without the removal of interior finishes.
2. Repairs are exempt from the requirements of this section.

R313.3 Prohibited smoke alarm locations. A smoke alarm required under this section shall not be placed:
1. within 3 feet (914 mm) horizontally from any grille moving conditioned air within the living space; or
2. in any location or environment that is prohibited by the terms of the listing.

R313.4 Mounting requirements. Smoke alarms required by Section R313.2 shall be mounted in accordance with their listing, installation instructions, and the requirements of this section.

R313.4.1 Flat Ceilings. In rooms with flat, peaked sloping or single slope ceilings with a slope of less than 1.5/12, smoke alarms shall be mounted either:
1. on the ceiling at least 4 inches (102 mm) from each wall; or
2. on a wall with the top of the alarm not less than 4 inches (102 mm) below the ceiling and not farther from the ceiling than 12 inches (305 mm) or the distance from the ceiling specified in the smoke alarm manufacturer's listing and installation instructions, whichever is less.

R313.4.2 Peaked Sloping Ceilings. In rooms with peaked sloping ceilings with a slope of 1.5/12 or greater, smoke alarms shall be:
1. mounted on the ceiling or wall within 3 feet (914 mm) measured horizontally, from the peak of the ceiling;
2. at least 4 inches (102 mm), measured vertically, below the peak of the ceiling; and
3. at least 4 inches (102 mm) from any projecting structural element.

R313.4.3 Single Slope Ceilings. In rooms with single slope ceilings with a slope of 1.5/12 or greater, smoke alarms shall be:
1. mounted on the ceiling or wall within 3 feet (914 mm), measured horizontally, of the high point of the ceiling; and
2. not closer than 4 inches (102 mm) from any adjoining wall surfaces or any projecting structural element.

R313.4.4 Visible notification appliances. In addition to the smoke alarms required pursuant to this section, listed visible notification appliances, when installed, shall meet the following:

R313.4.4.1 Candela Rating-Sleeping Room. A visible notification appliance, when installed in a room designed for sleeping, shall have a minimum rating of 177 candela, except that when the visible notification appliance is wall-mounted or suspended more than 24 inches (610 mm) below the ceiling, a minimum rating of 110 candela is permitted.

R313.4.4.2 Candela Rating-Nonsleeping Room. A visible notification appliance, when installed in an area other than a room designed for sleeping, shall have a minimum rating of 15 candela.

R313.5 Connection to Power Source. Each smoke alarm shall be powered from:
1. the electrical system of the home as the primary power source and a battery as a secondary power source; or
2. a battery rated for a 10 year life, provided the smoke alarm is listed for use with a 10 year battery.

Exception: Visible notification appliances are required to operate from the primary power source but are not required to operate from a secondary power source.

R313.5.1 Circuitry. Each smoke alarm whose primary power source is the home electrical system shall be mounted on an electrical outlet box and be connected by a permanent wiring method to a general branch circuit. The same branch circuit may
serve more than one smoke alarm. The branch circuit for the alarm shall not include any switches between the branch circuit overcurrent protective device and the alarm and shall not be protected by a ground-fault circuit-interrupter.

R313.5.2 Interconnection. When more than one smoke alarm is required to be installed within an individual dwelling unit, the alarm devices shall be interconnected in such a manner that the actuation of one alarm will activate all of the alarms in the individual unit.

**EXCEPTION:** Foam plastic insulation may be installed on the walls of attics and crawlspaces with no covering applied provided all the following conditions are met:

1. The maximum thickness/density is within the following:
   a. Maximum 4 inch thickness with a maximum density of 4.0 pcf.
   b. Up to 2 inch thickness with a maximum density of 2.5 pcf.
   c. Up to 1 inch thickness with a maximum density of 2.0 pcf.
2. The maximum flame spread is 25.
3. The maximum smoke development rating is 450.
4. The entry to the attic or crawlspace is made only for service or maintenance (not used for storage).
5. There are not interconnected basement areas.
6. The air in the attic or crawlspace is not circulated to other parts of the building.
7. Where fuel-burning appliances other than direct vent appliances or exposed (not sealed) motors are located more than 10 feet away from the foam insulation in the attic or crawlspace.

1. The spacing "S" is the tributary load in the girder. It is found by adding the unsupported spans of the floor joists on each side that are supported by the girder and dividing by 2.
2. Figures under type of loading columns are the allowable girder span.
   - Type A loading is for a girder supporting 1 floor and a roof.
   - Type B loading is for a girder supporting 2 floors and a roof.
   - Type C loading is for a girder supporting 3 floors and a roof.
3. Required size of column is based on girder support from 2 sides. Size of footing is based on allowable soil pressure of 2,000 pounds per square foot.
5. Footing thickness is based on the use of plain concrete with an ultimate compressive strength of not less than 2,000 pounds per square inch at 28 days. If approved, the footing thickness may be reduced based on an engineered design utilizing higher strength concrete and/or reinforcement.

(3) Amend Exception 5 as follows: Delete "Section N1102.1.7" and substitute "Chapter 11 of this code".
(4) Add Exception 6 to read as follows: 6. Ventilation openings are not required when the under-floor space is insulated in accordance with Chapter 11 of this code, the insulation materials comply with Sections R314 and R316 of this code and the ground surface is covered with an approved vapor retarder that extends to the exterior walls and all penetrations. The vapor retarder shall have a minimum thickness of 0.006 inch and shall be installed so that any joints are lapped at least 6 inches (152 mm). Mechanical ductwork shall be uninsulated and shall have no openings into the under-floor space. A hard surface pad with dimensions of at least 16 inches (407 mm) by 16 inches (407 mm), and an electrical receptacle shall be installed to allow for the installation of dehumidification equipment in the event of high humidity conditions in the under-floor spaces. Openings into conditioned space shall be permitted.
(5) Add Exception 7 to read as follows: 7. Ventilation openings are not required when the under-floor space is insulated in accordance with Chapter 11 of this code, the insulation materials comply with Sections R314 and R316 of this code and there is a concrete floor at least 2 inches (51 mm) thick installed on the ground surface of the under-floor space. A vapor retarder, at least 0.006 inch (.152 mm) thick and extending to the exterior walls and penetrations, shall be installed under the concrete floor. Conditioned air shall be circulated through the under-floor space at a rate of at least 1 cfm (10 m³) for each 50 square feet (1.02 L/s) of under-floor space.

When the under-floor space access opening is through a wall, the opening shall be a minimum of 24 inches (609 mm) wide by 16 inches (406 mm) high with an areaway provided for access to the under-floor opening. The areaway shall be not less than 24 inches (609 mm) long parallel to the wall at the access opening by 16 inches (406 mm) wide perpendicular to the wall at the center of the access opening. The bottom of the areaway shall be below the threshold of the access opening. The under-floor access opening shall not be under a door.
Exception: Access may be placed under a doorway provided the step or steps that cover the opening to the crawlspace are attached to the structure at the top with a fixed pin-type hinge, so that, when the step or steps are in the raised position, passage by way of the doorway is restricted.

Sec. 81. Delete the title and text of SECTION R408.6 and substitute to read as follows: Underfloor drainage. In other than Group I soils, underfloor spaces shall be drained to prevent water accumulation by one of the following methods:
1. The underfloor space shall be graded at a slope of not less than 1 inch (25 mm) for each 10 feet (3,048 mm) to a gravity discharge or a sump pit having a minimum size of 18 inches (457 mm) in diameter by 24 inches (610 mm) deep installed below the lowest point of the slope so that, in the event of excess water accumulation, a sump pump can be readily installed.
2. The underfloor space shall be graded at a slope of not less than ½ inch (13 mm) for each 10 feet (3,048 mm) to a gravity discharge or a sump pit having a minimum size of 18 inches (457 mm) in diameter by 24 inches (610 mm) deep installed below the lowest point of the slope and not less than 3 inches (76 mm) of granular material shall be placed between the ground surface and the vapor retarder so that, in the event of excess water accumulation, a sump pump can be readily installed.

* Spans are given in feet and inches.
* Tabulated values assume #2 grade lumber.
* Building width is measured perpendicular to the ridge. For widths between those shown, spans are permitted to be interpolated.
* NJ-Number of jack studs required to support each end. Where the number of required jack studs equals one, the header is permitted to be supported by an approved framing anchor attached to the full-height wall stud and to the header.
* Use 30 psf ground snow load for cases in which ground snow load is less than 30 psf and the roof live load is equal to or less than 20 psf.

1. The installation complies with manufacturer's instructions.
2. A humidistat is included with the installation.
3. An ammeter or equivalent device is installed in a readily visible location.

Sec. 139. Delete the text of Chapter 11 in its entirety and substitute the following: Section N1101; GENERAL N1101.1 Scope. This chapter sets forth energy-efficiency requirements for the design and construction of buildings regulated by this code.

Exception: Provided that they are separated by building envelope assemblies from the remainder of the building, portions of the building that do not enclose conditioned space shall be exempt from the building envelope provisions but shall comply with the provisions for building mechanical and service water systems.

N1101.2 Compliance. Compliance with this chapter shall be demonstrated by meeting the requirements of the applicable
sections and tables of Sections N1101, N1102, N1104, and N1105 of this chapter. Compliance with Section N1103 or N1106 is an alternative to compliance with Section N1102. Where applicable, provisions are based on the climate zone where the building is located as set forth in FIGURE 11-1 below.

N1101.2.1 Eligible buildings. Compliance for detached one and two family dwellings and for townhouses shall be demonstrated by meeting the requirements of subsection N1101.2.

N1101.3 Materials and equipment. Materials and equipment shall be identified as complying with the provisions of this chapter. Materials and equipment shall be listed and labeled for their intended use and shall be installed in accordance with the manufacturer's installation instructions.

N1101.3.1 Insulation. The thermal resistance (R-value) shall be indicated on all insulation and the insulation installed such that the R-value can be verified during inspection, or evidence of compliance of the installed R-value shall be provided at the job site by the insulation installer.

N1101.3.2 Fenestration. The U-factor of fenestration shall be determined in accordance with NFRC 100 by an accredited, independent laboratory and labeled and certified by the manufacturer. The solar heat gain coefficient (SHGC) of fenestration shall be determined in accordance with NFRC 200 by an accredited, independent laboratory and labeled and certified by the manufacturer.

N1101.3.2.1 Default fenestration performance. When a manufacturer has not determined a fenestration product's U-factor in accordance with NFRC 100, compliance shall be determined by assigning such products a default U-factor from TABLES 11-1 and 11-2. When a manufacturer has not determined a fenestration product's SHGC in accordance with NFRC 200, compliance shall be determined by assigning such products a default SHGC from TABLE 11-3.

N1101.3.3 Minimum Insulation R-Values. The minimum insulation R-values permitted using tradeoffs from Section N1103 or Section N1106 for all climate regions shall be R-13 for abovegrade walls, R-30 for ceilings, and R-19 for floors. Section N1101.4 Alternate energy materials, methods, and design. The provisions of this code are not intended to prevent the use of any material, method of construction, design, or insulating system not specifically prescribed herein, provided that such construction, design, or insulating system has been approved as meeting the intent of the code. Compliance with specific provisions and the intent of this code shall be determined through the use of approved computer software (such as REScheck or MECcheck provided by the Department of Energy), worksheets, compliance manuals (from ASTM, etc.), and other similar materials.

SECTION N1102. COMPLIANCE BY PRESCRIPTIVE SPECIFICATIONS ON INDIVIDUAL COMPONENTS
N1102.1 Thermal performance criteria. The minimum required insulation R-value or maximum required U-factor for each element in the building thermal envelope (fenestration, roof/ceiling, opaque wall, floor, slab edge, crawlspace wall, and basement wall) shall be in accordance with criteria in TABLE 11-5.

R-values are minimums. U-factors and SHGC are maximums. R-19 insulation shall be permitted to be compressed except as noted. The glazing U-factors are for windows only. The default U-factors for doors are in TABLES 11-1 and 11-2. The maximum door U-values to be allowed with this table are as follows: main exit, 0.54; other exit doors, 0.34; sliding glass doors, French doors, and atrium doors, 0.55.

bSkylights are glazed fenestration less than 60 degrees from horizontal.

cCavity insulation plus sheathing (wood frame walls only). Steel frame walls require the installation of an exterior insulated sheathing in accordance with Section N1102.1.1.2.

dOr insulation sufficient to fill the cavity, R-19 minimum.

Box or rim joist cavity spaces must be insulated R 19 minimum, entire exterior perimeter.

The insulation shall be installed from the top of the slab to the required depth, horizontally or vertically, or a combination of both, until the required depth is achieved. N1102.1.1 Exterior walls. The minimum required R-value in TABLES 11-5 shall be met by the sum of the R-values of the insulation materials installed in framing cavities and/or sheathing applied and not by framing, dry wall, or exterior siding materials. Insulation separated from the conditioned space by a vented space shall not be counted towards the required R-value. N1102.1.1.1 Mass walls. For purposes of this section, the following definitions apply: Mass walls with exterior insulation position are those that have the entire effective mass layer interior to an insulation layer. Mass walls with integral insulation position are those that have either insulation and mass materials well mixed as in wood (logs) or substantially equal amounts of mass material on the interior and exterior of insulation as in concrete masonry units with insulated cores or masonry cavity walls. Mass walls with interior insulation position are those that have the mass material located exterior to the insulating material. Mass walls shall be permitted to meet the mass wall criteria in TABLE 11-6 based on the insulation position and the climate zone where the building is located. Other mass walls shall meet the frame wall criteria for the building type and the climate zone where the building is located based on the sum of interior and exterior insulation. Mass walls not meeting either of the above descriptions for exterior or integral positions shall meet the requirements for other mass walls in TABLE 11-6. The R-value for a solid concrete wall with a thickness of 4 inches (102 mm) or greater is R-1.1. R-values for other assemblies are permitted to be based on hot box tests.

N1102.1.1.2. Steel-frame walls. When steel framing construction is used, insulated sheathing with an R-5 value shall be installed in addition to the minimum required R-value for frame walls determined in accordance with TABLE 11-5.

N1102.1.2 Ceilings. The required "Ceiling R-value" in TABLE 11-5 assumes standard truss or rafter construction and shall apply to all roof/ceiling portions of the building thermal envelope including cathedral ceilings. R-30 shall be permitted to be compressed over the top plate to obtain the required rafter air spaces. R-30 shall be permitted to be used over the top plate where R-38 is required. R-38 shall be permitted over the top plate where R-49 is required.

N1102.1.3 Opaque doors. Opaque doors separating conditioned and unconditioned space shall have a maximum U-factor of 0.35. One opaque door shall be permitted to be exempt from this U-factor requirement.

N1102.1.4 Floors. The required R-value in TABLE 11-5 shall apply to all floors, except any individual floor assembly with over 25 percent of its conditioned floor area exposed directly to outside air shall meet the R-value requirement in TABLE 11-5 for ceilings.

N1102.1.5 Basement walls. When insulating basement walls, the required R-values shall be applied from the top of the basement wall to the depth required by TABLE 11-5.

N1102.1.6 Slab-on-grade floors. For slabs with a top edge 8 inches (203 mm) or less above or 12 inches (305 mm) or less below finished grade, the required R-value in TABLE 11-5 shall be applied to the outside of the foundation or the inside of the foundation wall. The insulation shall extend downward from the top of the slab, or downward to the bottom of the slab and then horizontally in either direction, for the minimum distance listed in TABLE 11-5.

When installed between the exterior wall and the edge of the interior slab, the top edge of the insulation shall be permitted to be cut at a 45 degree (0.79 radians) angle away from the exterior wall. Insulation extending horizontally away from the building shall be protected as set forth by Section R403.3.1.

R-2 shall be added to the values in TABLE 11-5 where uninsulated hot water pipes, air distribution ducts, or electric heating cables are installed within or under the slab.

N1102.1.7 Crawlspace walls. Where the floor above the crawlspace is uninsulated, and the crawlspace is not vented to outside air, insulation shall be installed on crawlspace walls as required in TABLE 11-5. Crawlspace wall insulation shall be permanently fastened to the wall and extend downward from the floor to the finished grade level and then vertically and/or horizontally for at least an additional 24 inches (610 mm). The exposed earth in all crawlspace foundations shall be covered with a continuous 6 mil vapor retarder having a maximum permeance rating of 1.0 perm (5.74525 × 10⁻¹¹ kg/(Pa × s × m²)).

N1102.1.8 Masonry veneer. For exterior foundation insulation, that horizontal portion of the foundation that supports a masonry veneer shall not be required to be insulated.

N1102.1.9 Protection. Insulating materials applied to the exterior of foundation walls shall be protected from damage by a rigid, opaque, and weather-resistant covering extending 6 inches (152 mm) below finished grade.

N1102.1.10 Air leakage. Exterior joints, seams, or penetrations in the building envelope, separating conditioned and unconditioned spaces, that are sources of air leakage shall be sealed with caulking materials, closed with gasketing systems, tapered, or covered with moisture vapor-permeable house-wrap. Sealing materials spanning joints between dissimilar construction materials shall allow for differential expansion and contraction of the construction materials. This includes sealing around tubs and showers, at the attic and crawlspace panels, at recessed lights, and around all plumbing and electrical penetrations.

**Exceptions:**
1. Vertical seams and joints with gaps of 1/8 inch (3 mm) or less that break over a stud.
2. Unvented crawlspaces.

N1102.1.11 Recessed luminaires. When installed in the building envelope, recessed luminaires shall meet one of the following:
1. Type IC rated, manufactured with no penetrations between the inside of the recessed luminaire and ceiling cavity and sealed or gasketed to prevent air leakage into the unconditioned space.
2. Type IC or non-IC rated, installed inside a sealed box constructed from a minimum 0.5 inch (12.7 mm) thick gypsum wallboard or constructed from a preformed polymeric vapor barrier, or other airtight assembly manufactured for this purpose, while maintaining required clearances of not less than 0.5 inch (12.7 mm) from combustible material and not less than 3 inches (76 mm) from insulation material.
3. Type IC rated admitting no more than 2.0 cubic feet per minute (cfm) (0.944L/s) of air movement from the conditioned space to the ceiling cavity. The luminaire shall be tested at 1.57 psi (75 Pa) pressure difference and shall be labeled.

SECTION N1103 COMPLIANCE BY TOTAL BUILDING ENVELOPE PERFORMANCE
N1103.1 Compliance with this section is an alternative to compliance with Section N1102.
N1103.2 Compliance by total building envelope performance. The building envelope design of a proposed building shall be permitted to deviate from the U-factors, U-factors, or R-values specified in TABLE 11-7, provided the total thermal transmission heat gain or loss for the proposed building envelope does not exceed the total heat gain or loss resulting from the proposed building's conformance to the values specified in TABLE 11-7. For basement and crawlspace walls that are part of the building envelope, the U-factor of the proposed foundation shall be adjusted by the R-value of the adjacent soil where the corresponding U-factor in TABLE 11-7 is similarly adjusted. Heat gain or loss calculations for slab edge and basement or crawlspace wall foundations shall be determined using approved methods.

SECTION N1104 MECHANICAL SYSTEMS
N1104.1 Heating and air conditioning appliance and equipment performance. Performance of equipment listed in TABLE 11-8 is covered by preemptive federal law. Appliances and equipment not listed in TABLE 11-8 shall be approved. Data furnished by the equipment supplier, or certified under a nationally recognized certification procedure, shall be used to satisfy these requirements. All such equipment shall be installed in accordance with the manufacturer's instructions.

For SI: 1 Btu/h = 0.2931 W.

aFor multicapacity equipment, the minimum performance shall apply to each capacity step provided. Multicapacity refers to manufacturer-published ratings for more than one capacity mode allowed by the product’s controls.

bThis is used to be consistent with the National Appliance Energy Conservation Act (NAECA) of 1987 (Public Law 100-12).

cThese requirements apply to combination units not covered by NAECA (three-phase power or cooling capacity 65,000 Btu/h).

dExcept for gas-fired steam boilers, for which the minimum AFUE shall be 75 percent.

eSeasonal rating.

N1104.2 Controls. At least one thermostat shall be provided for each separate heating, cooling, or combination heating and cooling system. Heat pumps shall have controls that prevent supplementary electric resistance heater operation when the heating load can be met by the heat pump alone. Supplementary heater operation shall be permitted during outdoor coil defrost cycles not exceeding 15 minutes.

N1104.3 Duct insulation. All portions of the air distribution system that serve the permanent heating, ventilating, and air conditioning systems shall be installed in accordance with Section M1601 and be insulated to an installed R-4.2 when system components are located within the building but outside of conditioned space and R-8 when located outside of the building. When located within a building envelope assembly, at least R-8 shall be applied between the duct and that portion of the assembly furthest from conditioned space.

Exception: Exhaust air ducts and portions of the air distribution system within appliances or equipment.

N1104.4 Duct sealing. All ducts shall be sealed in accordance with Section M1601.3.1.

N1104.5 Piping insulation. All mechanical system piping that serves the permanent heating, ventilating, and air conditioning systems shall be insulated in accordance with TABLE 11-9.

Exception: Piping installed within appliances and equipment or piping serving fluids between 55°F (13°C) and 120°F (49°C).

For SI: 1 inch = 25.4 mm, °C = (°F - 32)/1.8.

aThe pipe insulation thicknesses specified in this table are based on insulation R-values ranging from R-4 to R-4.6 per inch of thickness. For materials with an R-value greater than R-4.6, the insulation thickness specified in this table may be reduced as follows:

New Minimum Thickness = \( \frac{4.6 \times \text{Table Thickness}}{\text{Actual R-value}} \)

For materials with an R-value less than R-4, the minimum insulation thickness shall be increased as follows:

New Minimum Thickness = \( \frac{4.0 \times \text{Table Thickness}}{\text{Actual R-value}} \)

bFor piping exposed to outdoor air, increase thickness by 0.5 inch.

Sec. 242. (a) At the end of item 6, in the exception, delete "", the applicable article".
(b) After item 6 of the exception, add item 7 and Table E3807.8 to read as follows: The allowable cable fill shall not exceed that permitted by Table E3807.8. A multiconductor cable having two or more conductors shall be treated as a single conductor for calculating the percentage of conduit fill area. For cables that have elliptical cross sections, the cross-sectional area calculation shall be based on the major diameter of the ellipse as a circle diameter.

(b) Delete the title and text of Section E4104.3, item 1, and substitute to read as follows: 1. Equipotential Bonding Grid. The parts specified in Section E4104.1 above shall be connected to an equipotential bonding grid with a solid copper conductor, insulated, covered, or bare, not smaller than 8 AWG or rigid metal conduit of brass or other identified corrosion-resistant metal conduit. Connections shall be made by exothermic welding or by listed pressure connectors or clamps that are labeled as being suitable for the purpose and are of stainless steel, brass, copper, or copper alloy. The equipotential bonding grid shall conform to the contours of the pool and shall extend within concrete or under other conductive paved, or under unpaved walking surfaces for 3 feet (914 mm) horizontally beyond the inside walls of the pool and shall be permitted to be any of the following:
1.1 Structural Reinforcing Steel. The structural reinforcing within a concrete pool shell or deck. Where deck reinforcing steel is not an integral part of the pool and its reinforcing, the deck reinforcing steel shall be bonded to other parts of the bonding grid at a minimum of four points uniformly spaced around the pool perimeter using a minimum 8 AWG solid copper conductor. Reinforcing steel shall not extend into soil beyond the concrete envelope.
1.2 Bolted or Welded Metal Pools. The wall of a bolted or welded metal pool.
1.3 Alternate Means. This system shall be permitted to be constructed as specified in (i) through (iii):
   (i) Materials and Connections. The grid shall be constructed of minimum 8 AWG bare solid copper conductors. Conductors shall be bonded to each other at all points of crossing. Connections shall be made in accordance with item 1 above.
   (ii) Grid Structure. The grid shall be arranged in a perpendicular grid pattern with 12 inches (305 mm) between conductors with tolerance of 4 inches (102 mm).
(iii) Securing. The grid shall be secured within concrete pool and deck material or under other conductive pool and deck material.

Exception: The equipotential bonding grid shall not be required to be installed under the bottom of or vertically along the walls of vinyl lined polymer wall, fiberglass composite, or other pools constructed of nonconductive materials. The equipotential bonding grid shall not be required to be installed under pool decks of nonconductive materials. Any metal parts of the pool, including metal structural supports, shall be bonded in accordance with E4104.1. For the purposes of this section, poured concrete, pneumatically applied (sprayed) concrete, and concrete block, with painted or plastered coatings, shall be considered conductive material. Asphalt, flagstone, brick, tile, and concrete pavers are examples of conductive deck paving materials.

1. Construction or alteration of any foundation system that is necessary to provide for the installation of a manufactured home unit.
2. Construction, installation, addition, or alteration of the building service equipment that is necessary for connecting manufactured homes to water, fuel, or power supplies and sewage systems.
3. Alterations or additions to existing manufactured homes. The construction, alteration, and use of accessory buildings and structures and their building service equipment shall comply with the applicable requirements of the Indiana Residential Code (675 IAC 14).
These provisions shall not be applicable to the design and factory construction of manufactured homes nor shall they be deemed to authorize either modifications or additions to manufactured homes.
(b) Change subsection AE102.1 to read as follows: Manufactured homes and their building service equipment to which additions or alterations are made shall comply with all of the applicable requirements of the Indiana Residential Code (675 IAC 14) for new facilities.
(c) Change the title and text of subsection AE102.2 to read as follows: AE102.2 Additions. Additions made to a manufactured home shall conform to the requirements of this code and all other applicable Indiana codes. Additions shall be structurally independent from the manufactured home.

   EXCEPTION: Structural independence need not be provided when:
   (1) structural calculations are provided to the building official confirming that the addition will not adversely affect the structural integrity of the manufactured home, or
   (2) the manufacturer of the home confirms, in writing, that the home will safely support the structural loads imposed by the proposed addition.

(d) Add subsection AE102.2.1 to read as follows: AE102.2.1 Alterations. Alterations may be made to any manufactured home or to its building service equipment without requiring the existing manufactured home or its building service equipment to comply with all the requirements of these provisions, provided the alteration or additions conform to that required for new construction, and provided further that no hazard to life, health, or safety will be created by such additions or alterations.

(e) Delete subsection AE102.3 without substitution.

(f) Change subsection AE102.4 to read as follows: The use or occupancy of any manufactured home shall not be changed unless evidence is provided to show compliance with the applicable rules of the Fire Prevention and Building Safety Commission for the new use or occupancy and be released for construction when required by the General Administrative Rules (675 IAC 12).

(g) Delete AE102.5 without substitution.

(h) Change subsection AE301.1 to read as follows: Where required by local ordinance, a manufactured home shall not be installed or altered without first obtaining a permit.

(i) Change the title and text of subsection AE301.2 to read as follows: AE301.2 Additions and alterations to a manufactured home. Where required by local ordinance, a permit shall be obtained to alter, remodel, or add accessory buildings or structures to a manufactured home.

(j) Delete subsection AE301.3 without substitution.

(k) Delete subsection AE301.4 without substitution.

(l) Delete SECTION AE302 without substitution.

(m) Delete SECTION AE303 without substitution.

(n) Delete SECTION AE304 without substitution.

(o) Delete SECTION AE305 without substitution.

(p) Delete SECTION AE306 without substitution.

(q) Delete SECTION AE307 without substitution.

(r) Change SECTION AE402 to read as follows: Manufactured homes and their accessory buildings shall be located on the property in accordance with the applicable sections of the Indiana Residential Code (675 IAC 14) and the ordinances of the jurisdiction in which the home is sited.

(s) Change the exception in subsection AE501.1 to read as follows: EXCEPTION: When specifically approved by the building official, foundation and anchoring systems that are constructed in accordance with the methods specified in Section A600 of this code.

(t) Change the text of AE502.1 to read as follows: Foundation systems designed and constructed in accordance with this section shall be considered as a permanent installation. Where the manufacturer's installation instructions and foundation design details for the home are available, the foundation system shall be installed in accordance with those instructions.

(u) Change subsection AE502.5 to read as follows: Provisions shall be made for the control and drainage of surface water away from the manufactured home in accordance with SECTION 401.3 of this code.

(v) Change subsection AE504 to read as follows: Accessory structures shall not be structurally supported by a manufactured home.

   EXCEPTION: Structural independence need not be provided when:
   1. structural calculations are provided to the building official confirming that the addition will not adversely affect the structural integrity of the manufactured home, or
   2. the manufacturer of the home confirms, in writing, that the home will safely support the structural loads imposed by the proposed accessory structure.

(w) Change SECTION AE505 to read as follows: The alteration, replacement, or addition to the building service equipment, other than that required for the initial installation of the manufactured home, shall conform to the regulations set forth in this code.

(x) Delete subsection AE506.2 without substitution.
(y) Change subsection AE507 to read as follows: Alterations made to a manufactured home subsequent to its initial installation shall conform to the occupancy, fire safety, and energy conservation requirements set forth in, or referenced by, the applicable rules of the Fire Prevention and Building Safety Commission.

(z) Change AE604.1 to read as follows: Ground Anchors. Ground anchors shall be designed and installed to transfer the anchoring loads to the ground. The ground anchors shall be sized and installed to the full depth and as specified in the manufacturer's installation manual and shall be installed in undisturbed soil.

(aa) Change subsection AE604.3 to read as follows: All anchoring equipment exposed to weathering shall have a resistance to weather deterioration at least equivalent to that provided by a coating of zinc on steel of not less than 0.625 ounces per square foot on each side of the surface coated.

(bb) Add a new SECTION AE701 Manufacturer's Installation Instructions to read as follows: Manufacturer's Installation Instructions. When the manufacturer's installation instructions are available, manufactured homes installed upon owned (nonrental) lots shall be installed per those installation instructions.
